

Hi Johan

Yes, it will be every version of reader that was issued before the last 500 units of the Transnet order, which in your case, would be the last units that you purchased in total since February.

The simplest way to check is that any serial number that starts with LESS than 3300 in the first four digits (you have anywhere from 2004 units right up to 3151 units) will be V5 board, whilst anything with 3300 and above will be the V6.

Regards  
Gary

Hi Gary,

Can you please tell me which batch version of the IPB7 needs the annual CMOS battery replacement?

Thanks

Kind Regards
